Creating a randomized quiz is a great tool to use that allows you to have the computer randomly select questions from your question bank. This will provide a quiz that has different questions and place the questions in different order for each student. In order for this to be effective, you need to have several questions to choose from. Example, if you had 50 questions in a category, you could have the computer randomly select 10 or 20 from that category.

|	
Choose the number of random questions you want to add. Click Add to quiz. To select number of questions not listed, you can use a combination of two numbers. For example to have a quiz with 35 questions, select 30 and click Add to quiz. Then, go back and select 5 and click Add to quiz.	
Random questions will be added to your quiz. Note the dice icon to indicate these questions will be randomly generated.	
Click Save.
